Lung compliance, or pulmonary compliance, is a measure of the lung's ability to stretch and expand (distensibility of elastic tissue). In clinical practice it is separated into two different measurements, static compliance and dynamic compliance. Static lung compliance is the change in volume for any given applied . Alterations in airway resistance, lung compliance and.

Elastic resistance is established based on: 1. Surface tension in the lung 2. Lung elastance or compliance C. Nonelastic resistance is primarily the resistance to.
