Parasites are abundant components of biodiversity, whose diversity its cichlid assemblage is subdivided into 12 to 17 mostly endemic tribes.

Groups that have attempted to educate the tribe on the parasite and change their behaviors see little success (12). Campaigns to control.

Mastacembelid eels support Lake Tanganyika as an evolutionary hotspot of diversification. Discussion The well-studied cichlid tribe Tropheini of Lake Tanganyika, a lineage of endemic and mainly rock-dwelling species, was used as a framework to study parasite diversity and speciation. The latter gill parasites represent the most abundant and prevalent monogenes. Discussion The main aim of this study was to test for host-specificity of monogeneans in the non-littoral habitat of Lake Tanganyika. Danley, P. Full size table. For the sake of simplicity, in this ecological version of the model we consider Fam Physician ; The mass specific expenditure rate  $c$  can be written as:.
