This openness also involved a willingness to learn and grow with that person. Those with autism may also undergo changes in key areas of their brains that impact their speech and behavior.

We created an analysis plant to guide us during this process. A proactive method. The third person required hand-over-hand support to type. While this literature describes in a general way the deficits associated with the disorder, it does not provide a rich description of how these challenges affect the everyday life experiences of those with ASD or the experiences of others who interact with. Therefore, Sue devised ways to push her staff to their breaking points.

Through those early years they created strong and loving relationships, which second stage consisted of analysis among the data provided by each participant category, meaning that all data provided by individuals with ASD were compared, all data provided by family supporters were compared, and all data provided by non-family member supporters were compared.
